

**PELORUS
TERMINALS**

Company profile

Storage. Shipping. Terminal logistics.

For partners, investors and clients

www.prterminals.com

Energy movement. A clear commercial focus.

Pelorus Terminals brings together storage, product handling and maritime coordination for producers, refiners, traders and industrial customers. Our business starts with understanding the proposed requirement and establishing a clear basis for commercial discussion.

Product suitability, quantities, location and timing shape each enquiry. We consider those details alongside the relevant transfer requirements, documentation and responsibilities.

OUR COMMERCIAL APPROACH

Understand the brief. Define the scope. Coordinate the next step.

Three services. One connected requirement.

01

Oil storage

Storage requirements are specific to the product, location and intended schedule. Pelorus Terminals starts with those details to frame a focused commercial discussion.

Key discussion points

- Product suitability
- Quantity and duration
- Transfer arrangements
- Commercial scope

02

Shipping

Pelorus Terminals brings together cargo information, route planning and terminal interfaces. Marine logistics works best when storage and handling requirements are considered alongside the intended shipment.

Key discussion points

- Cargo brief
- Route and timing
- Port coordination
- Scope review

03

Blending

Blending enquiries begin with the intended product specification. Pelorus Terminals discusses input products, compatibility and handling needs against location-specific technical capabilities.

Key discussion points

- Target specification
- Input products
- Quality requirements
- Technical scope

A global perspective. A location-specific conversation.

Pelorus Terminals presents the following markets in its published location directory. Each enquiry is considered against the product, timing, service scope and applicable facility arrangements.

North America

Houston - United States

Europe

Rotterdam - Netherlands

Middle East

Fujairah - United Arab Emirates

Asia-Pacific

Jurong - Singapore

Qingdao - China

South America

Port of Açu - Brazil

Porto Central - Brazil

Port of Santos - Brazil

Porto Central is presented as a future infrastructure development focus.

Space for the next movement.

Storage requirements are specific to the product, location and intended schedule. Pelorus Terminals starts with those details to frame a focused commercial discussion.

01

Product suitability

Identify the commodity, specification and relevant compatibility requirements.

02

Quantity and duration

State the required quantity and unit, preferred start date and intended storage period.

03

Transfer arrangements

Outline marine, pipeline or inland transfer needs, together with any inspection requirements.

04

Commercial scope

Confirm the applicable facility, service responsibilities, documentation and agreed terms.

Pelorus Terminals | From a clear brief to a defined commercial arrangement.

The connection between cargo and coast.

Pelorus Terminals brings together cargo information, route planning and terminal interfaces. Marine logistics works best when storage and handling requirements are considered alongside the intended shipment.

01

Cargo brief

Share product specifications, quantities and relevant handling information.

03

Port coordination

Discuss vessel information, loading or discharge expectations and related storage needs.

02

Route and timing

Outline origin, destination and the preferred shipping window.

04

Scope review

Clarify documentation, responsibilities and the proposed commercial arrangement.

Pelorus Terminals | From a clear brief to a defined commercial arrangement.

People first. Attention throughout.

The protection of people and responsible operating practices sit at the center of Pelorus Terminals' approach. Safety, access and handling requirements should be understood for the relevant location and proposed activity.

Safe work planning

Consider the activity, relevant controls and location-specific requirements before proceeding.

Operational security

Clarify access expectations, communications and appropriate information handling.

Environmental consideration

Include environmental protection alongside handling and operational planning.

Clarity before commitment.

Reliable commercial relationships depend on clear responsibilities and accurate representations. Pelorus Terminals encourages customers to verify the contracting entity, facility arrangements and applicable documentation through official channels.

01 Identity and roles

Know the contracting party and the responsibilities of each participant.

02 Documentation

Review the documents applicable to the proposed service and location.

03 Commercial agreement

Resolve questions about scope and terms before confirming an arrangement.

A longer view. A shared responsibility.

Pelorus Terminals takes a long-term view of customer requirements, collaboration and adaptable infrastructure. Responsible development balances commercial needs with operational capability and the changing energy landscape.

Environmental stewardship

Environmental stewardship forms part of Pelorus Terminals' approach to responsible energy logistics. Applicable containment, handling and environmental requirements should inform planning for the relevant facility.

Partnership discussions should bring commercial needs, technical suitability and responsible conduct into the same conversation.

The next conversation starts here.

Pelorus Terminals welcomes enquiries from customers, commercial partners and investors. A useful starting point is a clear description of the opportunity, the relevant market and the intended commercial scope.

Clients

Share product specifications, quantity and unit, location, preferred start date, duration and transfer needs.

Partners & investors

Describe the proposed relationship, strategic fit and relevant operating or development scope. Supporting corporate information can be discussed through the commercial team.
